

PROFESSIONAL SUMMARY

Security-focused IT professional with hands-on offensive-security training since 2019 and a full-stack development background. Strong in reconnaissance, enumeration and exploitation across Hack The Box and TryHackMe labs; completed the TryHackMe Jr Penetration Tester path and working through TCM Security's PNPT (Active Directory attacks and lateral movement). Builds and hardens real infrastructure — pfSense-segmented networks and a VoIP/PBX server — and ships production software with security designed in: row-level security, signed sessions, login throttling and audit logging. Completing a Bachelor of Information Systems and Technology in January 2027.

CORE SKILLS

Security Assessment	Reconnaissance & OSINT, port/service scanning, enumeration, exploitation, privilege escalation, web application testing, OWASP Top 10, findings write-ups; Kali Linux, Nmap, Burp Suite, Metasploit, Wireshark
Network & Infrastructure	pfSense firewall rule sets, VLANs and segmentation, NAT, VoIP/PBX deployment, Ubuntu Linux administration and hardening, log and traffic analysis, patching and access reviews
Cloud	AWS (Certified Cloud Practitioner — IAM, shared-responsibility model), Azure VM/virtual-network deployment, Vercel, Cloudflare R2 / S3 API
Scripting	Python, Bash, JavaScript/TypeScript, SQL
Secure Development	React, Next.js, React Native, Node/Express, PostgreSQL (row-level security, triggers), MongoDB; JWT and session auth, role-based access, rate limiting, audit logging, server-side validation, secrets hygiene; Git, GitHub Actions

PROFESSIONAL EXPERIENCE

Full Stack Developer — Mbsmash (smash-repair business, Melbourne) June 2025 – Present

- Designed, built and support a production parts, orders and invoicing platform that replaced four hand-maintained spreadsheets; staff order every part for every car through it — around \$20,000 of parts a week.
- Automated invoice processing with AI-assisted extraction from photographed or PDF invoices, matched against open orders and reconciled into stock.
- Integrated the business's external estimating system via its authenticated JSON API, with a normalisation layer that maps hand-entered values onto reference tables and flags anything unmatched.
- Implemented session auth, database-backed login throttling, a field-level audit log, PDF generation, automated off-site backups, and an Android app via Trusted Web Activity.

Software Developer — Locked-In (formerly GoalPath) February 2026 – Present

- Develop and maintain the Node/Express + MongoDB backend, React web client and React Native mobile app for a goal-tracking product; code reviews, testing and iterating on features from user feedback.

SELECTED PROJECTS

Full portfolio with live links at lalon-rahman-tirtha.netlify.app.

Offensive security labs — Hack The Box & TryHackMe 2019 – Present

- Machines completed end to end — reconnaissance, enumeration, exploitation and privilege escalation — with written walkthroughs; extending into Active Directory post-exploitation through the PNPT course.

pfSense firewall network & hardened VoIP server Ongoing

- Segmented network behind pfSense (on-premises and Azure) — WAN/LAN, VLANs, NAT, default-deny rule sets — validated by external scanning.
- VoIP/PBX server on Ubuntu with SIP extensions and call routing; management access restricted, strong credentials enforced, exposed services minimised, patched routinely.

SmashQuote — multi-tenant quoting platform 2026

- Quote builder for smash-repair shops with parts, paint, labour and sublet lines; live GST totals computed by a database trigger; printable A4 quotes; each shop isolated by Postgres row-level security; photos uploaded browser-to-bucket via presigned URLs. Next.js, Supabase, Cloudflare R2.

MB Smash Repair — parts management system · live demo · code 2025 – Present

- The production system above, with a public demo on sample data. Next.js, React, PostgreSQL, Vercel.

EDUCATION

Bachelor of Information Systems and Technology
Victorian Institute of Technology, Melbourne · Completing
January 2027

CERTIFICATIONS

- AWS Certified Cloud Practitioner — Amazon Web Services
- TryHackMe Jr Penetration Tester (completed); TCM Security PNPT (in progress)
- Certified Ethical Hacker coursework — EC-Council (2019)
